

# RF4-E set

Near-Field Probes E-field 30 MHz up to 3 GHz

## Short description

The RF4-E probe set contains two passive E field probes to measure electrical fields with a frequency range from 30 MHz up to 3 GHz for comparison purposes.

The probes are designed for the analysis of E field distributions, detection of coupling mechanisms on modules and evaluation of switching edges on signal leads and RF voltages of the supply system.

The near-field probes are small and handy. They have a current attenuating sheath and, therefore, are electrically shielded. The near-field probes can be connected to a spectrum analyzer or an oscilloscope with a 50  $\Omega$  input. They do not have an internal terminating resistance.
